PROCESS FLOW CHART

Lions Mane Powder

Lions Mane Powder is the dried, milled fruiting body of *Hericium erinaceus*. The fruiting bodies are received, cleaned, sorted and washed, dried, milled and sieved through 80 mesh. The powder is blended before quality inspection and QA release. No solvent, substrate or carrier is present; the article is the ground fruiting body itself.

The process is operated under a HACCP-based food-safety plan and GMP; critical control points include raw-material acceptance (CCP1), the in-process checks marked on the chart, and the final quality inspection and QA release. Off-spec material is rejected or reworked.
